I have not seen the results in question. I will check in with DEP and see what is the story. Jim, any luck on your side?

Hi Marcos and Jim

It seems like the radioactive containers at the Cowden Well Pad and/or Carter Impoundment have been getting some press lately about the analytical results and shipping it to a disposal site in Idaho.

Have either of you seen the results and can we reach out to the residents to confirm the results and disposal and alleviate any of their fears?

Hi Debbie,

My neighbor [REDACTED] received the email below from a newspaper reporter today. We are very concern about what we may have been exposed to and at what levels. The email states... Range Resources reported to us that they have received the lab characterizations and they have made arrangements to ship the boxes to a specialized radiation disposal site. Someone else needs to see the lab results not just Range. This is ridiculous... We have a right to know what we are being exposed to. No one at the DEP even knows where the radioactive material came from or how long it has been sitting near our homes. Someone needs to help us please...

This is very alarming to me that they are shipping this box to a site in Idaho. We need to get to the bottom of the lab results. I think they are trying to hide a large amount of Radioactive material.
Call me!

Also, this is the email I got from John Poister in regards to radiation at Carter. I'm going to try to get more info today.

"As for the Carter Impoundment roll off boxes. Range Resources reported to us that they have received the lab characterizations (analysis) from the testing lab and they have made arrangements to ship the boxes to a specialized radiation disposal site. It's likely to be sent to a site in Idaho. Range is awaiting Federal Department of Transportation authorization to ship the material. They will inform us when it is shipped."
